Thai

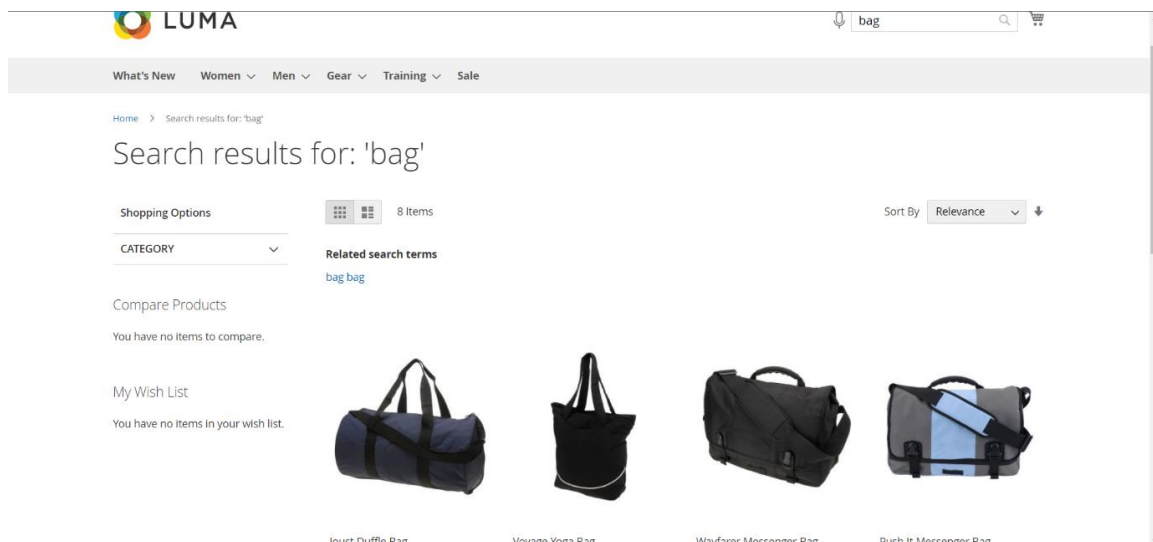

3.1 Search using Voice Search

Use the mic icon near the search bar for enabling the voice search

A browser popup will appear for allowing the mic access for the first-time use. Allowing the mic will enable the voice search for the browser.

Speak through microphone and it will display the recognised word in search bar and will automatically start searching.

4. Important notice

Supported only in Web Speech API enabled browsers (For example Google Chrome, Safari, etc).

Most browsers allow mic permission to only https enabled sites.

5. Support
